This is to certify that we carried out a Microbial Fogging treatment using a concentrated anti-microbial solution (Reg No: ACT29GNR529/242056/040/302) at a minimum rate of 400 parts per million.

The total area of the 850 sqm which makes up offices and ablutions were treated for viruses, bacteria and pathogens by means of a specialised Ultra Low Volume fogging machine.

Initial treatment undertaken on the 16/07/2020. The best virus control protocol suggests that this treatment be undertaken at intervals, that is site specific and can vary from weekly to monthly, to ensure continued virus control.
